Menthol Bans: Get the Facts Straight, Bans have Consequences

Get the Facts Straight

- Menthol cigarettes are <u>not</u> more dangerous than non-menthol cigarettes, according to the FDA [1]
- Menthol does <u>not</u> cause smokers to inhale more smoke [2]
- African-American smoking is at a historic low (12.4%), less than for whites (13.4%) -- despite differences in cigarette preferences [3]
- Menthol smoking among African
 American youth is so low that it cannot reliably be measured [4]
- Total youth menthol smoking is <u>0.6%</u> per most recent government data [5]
- Menthol cigarettes are <u>not</u> more "addictive" or harder to quit [6]
- Claims of "targeting" are based on ads that ran 40+ years ago, all cigarette ads are heavily restricted re content and placement [7]

Bans Have Consequences

Bans never work (e.g., failed war on drugs) and produce a litany of unintended consequences [8]

Bans lead to illicit markets, crime, negative interactions with police ("stop & frisk") and ultimately the criminal justice system [9]

- Ban will disproportionately impact
 African-Americans, Hispanics and their communities [10]
- Bans do not make smokers quit, [11]
 and if menthol smokers just switch to
 non-menthol, they will not improve
 health since the risks are the same [12]
- The best way to reduce smoking is through education and support for equal access to medical care
- Menthol smokers may seek dangerous DIY alternatives [13]
